

## Day 7: Live Deployment and Post-Launch Practices:

Day 7 marked the final and most exciting step: launching the fully functional e-commerce platform into the market. 🚀

After successfully deploying the project on **Vercel** in Day 6, today was all about taking it live and planning the next steps.

### Key Steps:

#### 1. Launching the Platform:

- Ensured the e-commerce platform was polished, fully functional, and ready for users.
- Double-checked that sensitive code and environment variables were securely stored to maintain privacy and security. 🔒

#### 2. Post-Launch Practices:

- Considered two possible paths forward:
  - **Starting a Business:**
    - Begin searching for potential investors to partner with, focusing on areas like marketing, inventory management, and scaling operations.
  - **Pursuing a Career:**
    - Update my resume to highlight this project and my skills in coding, deployment, and problem-solving.
    - Start practicing coding challenges and interview preparation to target roles in web development or software engineering.

This final day was a mix of reflection on the journey and planning for the future, whether it's growing a business or advancing my career in tech. ✨
